

Askion ColdEye+ Scanner

The only scanner for all applications.

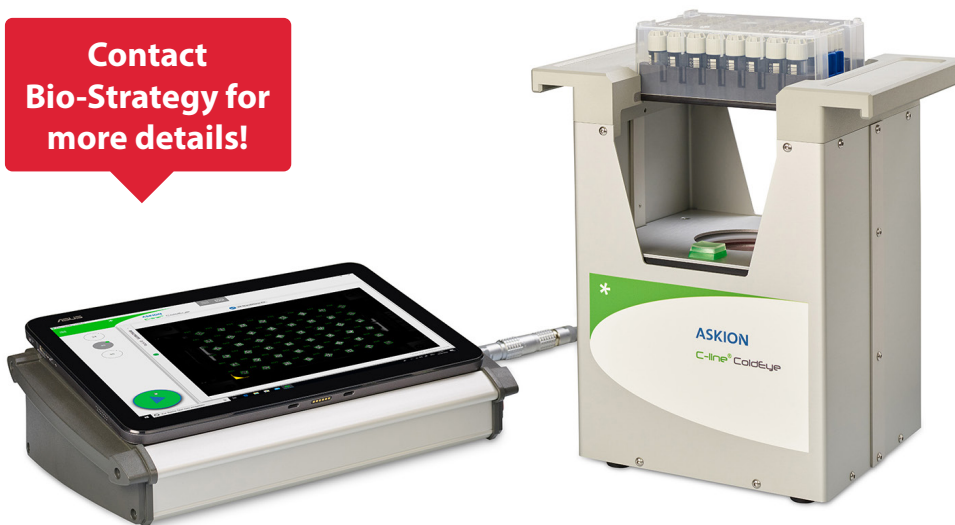

Performance features:

- Sample recognition within less than 5 seconds
- Simultaneous identification of several samples in SBS rack (96, 48, 24, etc.) or box format (9x9, 10x10, etc.)
- Reliable sample recognition at ambient temperatures from +25°C to -150°C
- Reads vial bottom code and rack / box barcode (1D/2D)
- Available as a portable standalone version or as a retrofittable installation solution for the workbench
- Sample format independent
- Integrated analysis software (for portable version)
- Integrated power supply for up to 5 h (at -150°C, for portable version)
- Enables best possible sample quality, due to minimal temperature changes during the scanning process

The ColdEye+ is the first and only portable scanner worldwide that enables safe and reliable sample identification at warm and cryogenic temperatures. This scanner works without impairment at room temperature (+ 25°C), in dry ice (approx. -80°C) up to the vapor phase of liquid nitrogen (up to -150°C). In addition, the scanner is independent of the sample format, which means that it can be used for a wide variety of laboratory applications.

By using ColdEye+, the process in the laboratory (e.g. inventory of -20°C or -80°C stores) can become safer (permanently identical temperatures for the samples) and more efficient (fast scan sequence of several samples / SBS racks/ Boxes one after the other). ColdEye+ is a modern scanner that simplifies everyday laboratory work for the user while maintaining sample quality.
